

Agenda

- SD...Everything
- Virtualisation of BNG functions
- Consolidation and introduction of new services
- Regaining Control of the network

Network Operations Tool Sets are changing

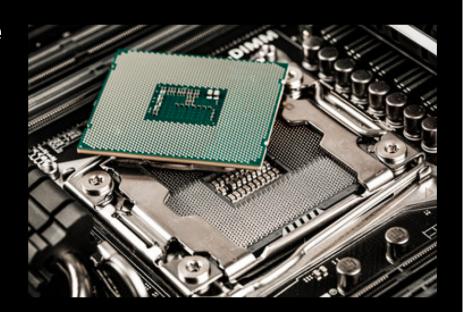

Network Operations Tool Sets are changing

Infrastructure as Code

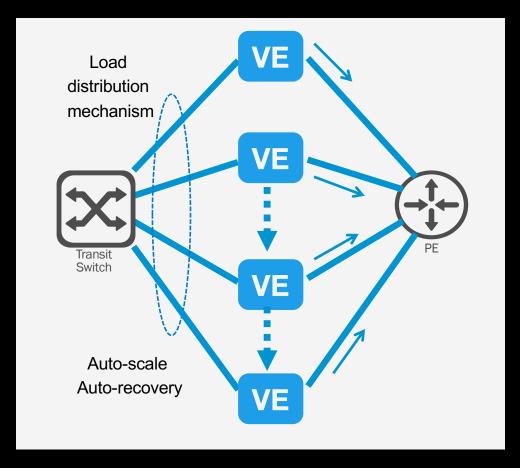

COTS Hardware

- Getting to the stage where we can do more with COTS x86 than with bespoke hardware
- Most vendors now support virtualisation
- VNFs bring portability, autoscale and resilience

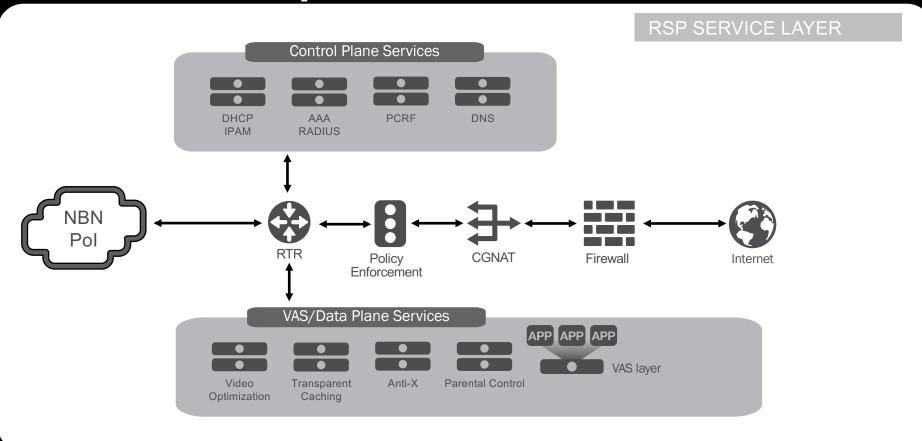

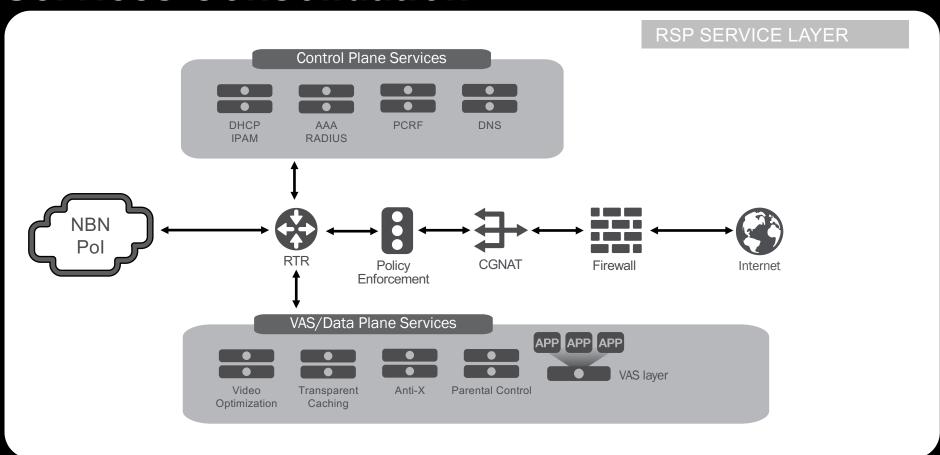

NFV for dynamic scale and resilience

- New virtual instances invoked/revoked as scale dictates
- HA through N+1 and autorecovery (pave+nuke)
- Load distribution across instances (L2, L3, L4?)

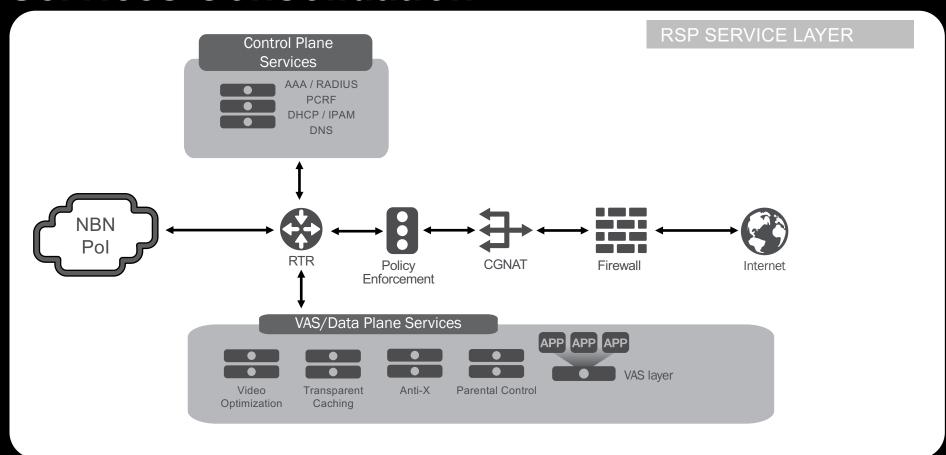

Traditional Bespoke Hardware

In-line DNS

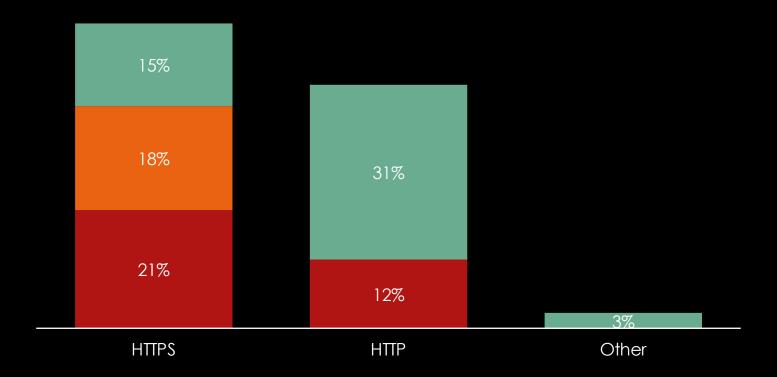

Traffic distribution – Encrypted video

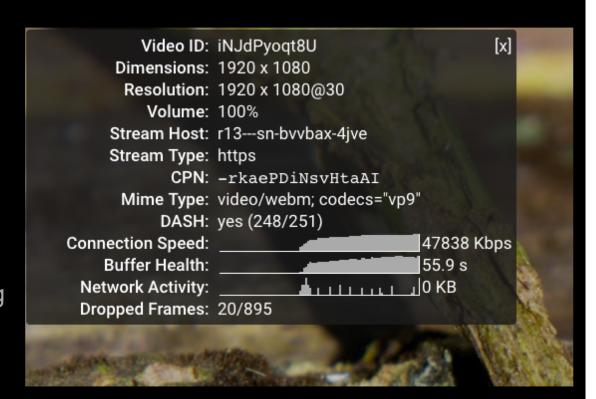

Managing Video

ID Video traffic type

- ABR
 - TCP Optimisation
- QUIC
- UDP Buffer based rate pacing

Just in time "emulation"

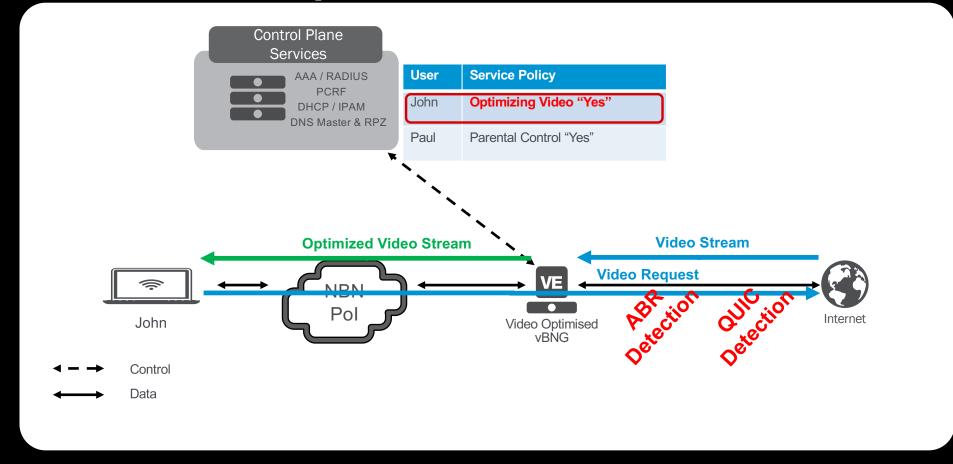

Unoptimised

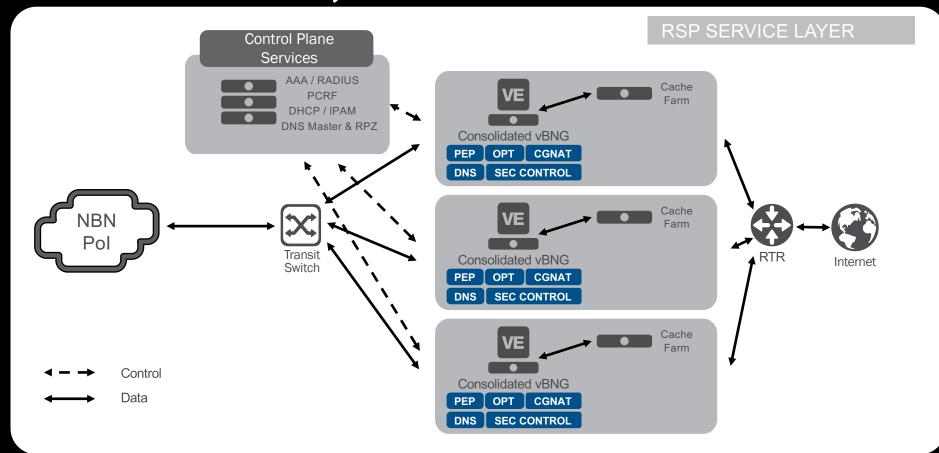

Optimised

In-line Video Optimisation

Service enabled, consolidated vBNG

Summary...

Virtualisation abounds

vBNG becomes a service enablement point

Service Delivery becomes the focus, not hardware

WE MAKE NBN

FASTER. SMARTER. SAFER. AND MORE OPTIMIZED ©
